# ADAS CALIBRATION SOLUTIONS

Designed to guarantee safety and comfort while driving, the ADAS (Advanced Driver Assistance Systems) are ever more common in latest generation vehicles.

Cameras, radars, LIDARs and sensors must be recalibrated when replaced, but even when actions that affect them are required, such as: replacing the windscreen and bumper, repairing the suspensions, aligning the wheels, changing the tyres, replacing the engine control unit, etc.

Knowing how to intervene in this field requires skill to keep pace with the times and be able to offer customers first-class assistance.

TEXA's solutions allow performing static and dynamic calibrations and resetting the ADAS correctly, guaranteeing the safety of the drivers and the technician who carries out the diagnosis and calibrations.

The IDC5 software guides mechanics step-by-step throughout all the phases, thanks to the helps sheets specifically developed for each vehicle, offering an extensive CAR and TRUCK coverage, at least 30% higher compared to other solutions on the market.

## OFN PRESSURE TEST KIT

The OFN Pressure Test Kit is used to detect leaks in an air conditioning system before recharging it. Being Oxygen free it doesn't contain any moisture which would be harmful to the A/C system. It is illegal to knowingly release refrigerant into the atmosphere which is why OFN is used.
